DETAILED ACTION

CLAIMS PRESENTED

Claims 1-18 are presented.

CLAIM REJECTIONS

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-18 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 recites "the random number source" at line 4. There is no antecedent.

Claims 2-15 depend from claim 1.

Claim 16 recites "the data source" at line 9 of page 70. Yet, there are two data sources.

Claim 17 recites "the data source" at line 6 of page 72. Yet, there are two data sources.

Claim 18 recites "patterns having a distribution corresponding to a portion of a distribution" at lines 5-6 of page 73. Twice, "a distribution" is recited. Applicant is requested either to distinguish the two distributions or to make clear that they are the same distribution.

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Regarding claim 1-18, the claimed invention is directed to non-statutory subject matter. MPEP 2106 gives a guideline. When nonfunctional descriptive material is recorded on some computer-readable medium, in a computer or on an electromagnetic carrier signal, it is not statutory since no requisite functionality is present to satisfy the practical application requirement. Merely claiming nonfunctional descriptive material, i.e., abstract ideas, stored on a computer-readable medium, in a computer, or on an electromagnetic carrier signal, does not make it statutory. See *Diehr*, 450 U.S. at 185-86, 209 USPQ at 8 (noting that the claims for an algorithm in *Benson* were unpatentable as abstract ideas because "[t]he sole practical application of the algorithm was in connection with the programming of a general purpose computer."). Such a result would exalt form over substance. Claims 1-18 recite perfunctory terms such as computer, buffer, and memory. Claims 1-18 are algorithmic in nature; merely claiming nonfunctional descriptive material, i.e., abstract idea, stored on a computer-readable medium or in a computer does not make it statutory.

Applicant is respectfully requested to amend or specifically and clearly point out specific portions of the claims so as to overcome the concerns raised by MPEP 2106 and 35 USC 101.

Subject Matter that may not be taught by prior art

Art Unit: 2134

Claims appear to contain subject matter that may overcome prior art. This is entirely a different topic than allowability. Only subject matter that is eligible to be patented may be patented. Please see the rejections under 35 USC 101.

The art made of record and not relied upon is considered pertinent to applicant's disclosure. The art disclosed general background. The art does show random numbers being used in obfuscation. Thus, any amendments to claims 1-18 should be designed to overcome the prior art as well as the concerns raised by the rejections in this Office Action.
